

Press Release

Art Systems announces launch of RM Tablet PC

Art Systems has announced availability of the brand new Tablet PC from RM, which gives CAD/GIS and other professionals more power and flexibility on the move.

The latest technological innovation that offers an alternative to the standard PC, the Tablet PC takes a leap into the future, removing even the need for a keyboard and mouse.

The digitiser stylus pen enables users to write directly onto the 10.4" TFT screen. Handwriting can then be saved or converted to text with advanced handwriting recognition, part of the special Microsoft Windows XP version that comes as standard on the Tablet PC.

And its high accuracy digitiser input makes the Tablet PC ideal for the CAD/GIS markets for live annotations and updates.

It's very portable at only 1.4kg weight, and a four-cell Lithium Ion Battery gives 3.5 hours life – making the Tablet PC ideal for people on the move. And the integrated wireless Ethernet with the option for a Firewire interface give excellent connectivity.

With the obvious risk of theft arising from taking a PC out of a secure environment, the fingerprint ID option is also very attractive.

Art Systems Managing Director David Thomas said: "We're very pleased to add the Tablet PC to our range of equipment from RM. It fits in very well with the complete imaging and printing solutions we offer via our resellers to the CAD and GIS markets."
