PRESS RELEASE

iiyama focus new generation CRT monitors at the CAD/GIS market

The first new generation, high brightness, DiamondTron U² CRT monitors, targeted at the CAD/GIS markets, are now available from ArtSystems, UK distributor for iiyama. The Vision Master™ Pro454 and Pro514 offer VGA input, integrated USB hub and speakers and high brightness OPQ mode for significant enhancement to moving image applications such as DVD, video editing and 3D visualisation and rendering.

The DiamondTron U² technology significantly improves the performance of these high-end monitors, by the unique combination of an enhanced contrast and brightness ratio to enable detailed image clarity through a range of applications and under various working conditions.

The choice of 19" and 22" flat tubes allows the user to measure parts of the picture with a ruler directly onto the screen or lay originals, which is imperative for applications associated with CAD/CAM or in surveying. Both models also incorporate 90% deflection, anti-reflect and anti-static coatings for visual clarity at all angles. High performance optimum image quality is achieved due to the high resolution, producing fine line accuracy that is second to none.

Steve Kilroy, New Business Development at ArtSystems explains, "the Vision Master™ CRT monitors bring a new diversity to the iiyama range. Renowned for their superior reliability as well as the high specifications as standard, the price performance ration is an additional benefit for those working in CAD/GIS environments".
