Photo Art by Innova

Inkjet Digital Fine Art Media for Photographic and Fine Art Printing

The Innova Photo Art collection is a selection of semi-matte and gloss papers coated especially for use with water based (Aqueous) inkjet printers. Featured within the range are the **Photo Art by Pictorico** products. Inkjet compatible films specifically designed for creating negatives from digital files. Ideal for use in traditional chemical darkrooms.

The range is built around the award winning Innova FibaPrint® portfolio and includes the most demanded resin coated photo paper surfaces.

Modelled on the traditional baryta papers found in the chemical darkrooms of the last century, Innova's ground breaking FibaPrint® papers are widely regarded as the ultimate digital photographic medium, perfectly replicating the much-loved look and feel of darkroom prints, produced with the ease and flexibility of seamless digital technology.

Included in the range are surfaces that are ultra smooth as well as subtly textured, available in bases ranging from natural to high white shades. All of the products are converted within our own production facility, ensuring that quality is closely monitored and controlled.

FibaPrint® White Matte 280gsm IFA-039

This is the only matte paper in our range to feature our revolutionary crystal layer technology.

A super-smooth finish with extra brightness ensures high contrast monochrome printing and creates a base to make colours really pop. The texture-free, flat matte finish allows easy viewing from all directions without the worry of glare. Great for portfolios and promotional pieces. This pigment and dye inkjet compatible archival fine art and photo paper is fully compliant with international archival standards.

© Steve Smith | www.stevesmithphotographer.com

Steve Smith RPS

"With Innova FibaPrint® I can now use a paper that I am completely satisfied with, the quality is just superb. The moment you first take a sheet out of the box it oozes quality... As a fine art photographer the first and most important aspect of my finished prints is the quality, and I am never left disappointed. The prints feel like a traditional darkroom fibre print and the results are just sublime.

The market place for papers is being swamped, many are just re branded for the retailer and the consumer. Therefore, it is a relief to know that I have now reached that stage when I am completely satisfied with the combination of the papers and printer that I use. I know there could be umpteen combinations that could be nearly or even as good, but I am a photographer, I want to take pictures not to evaluate all the papers on the market."

www.stevesmithphotographer.com

Resin Coated Photo Lustre 260gsm IFA-059

Fully compatible with both pigment and dye inks, this high white resin coated photo paper has a slightly stippled lustre surface.

Ideal for prints where you want the impact of gloss but with a slightly softer feel, this RC paper is a fantastic choice for photographers and artists looking to create reproductions of their work. With a microporous coating, the surface is touch dry as soon as it has been printed and the resin coated base imparts water resistant and lay flat properties.

Resin Coated Photo Gloss 260gsm IFA-060

The go-to paper for many photographers, this high white resin coated paper is exceptionally smooth.

A versatile working paper, compatible with pigment and dye inkjet printers, the smooth gloss surface and bright white base are capable of reproducing a wide colour gamut. This RC paper is suitable for colour and black and white printing. Anti curl properties make mounting for display in frames or binding into photo portfolios easy. It is also ideally suited for display on the JetMaster® Photo Panel by Innova.

Photo Art by PICTORICO

Take Digital into the Darkroom

Photo Art by Pictorico allows photographers to create negatives from digital files. Utilising all the digital tools available for editing and manipulation, they can build an image then reproduce it using traditional techniques.

The optimised surface ensures that the full tonal range of a negative is reproduced and light is blocked or allowed through in exactly the right areas. Ideally suited for use in chemical darkrooms, Photo Art by Pictorico is also a popular choice for screen printing professionals. Each film is capable of producing dense colour blocks with crisp, clean edges. Perfect for creating defined half tone patterns for smooth gradation in screen printed images.

Please Note: Photo Art by Pictorico is only available from Innova Art resellers in Europe. For details of Pictorico dealers outside this area, please visit diamond-jet.com/pictoricotop.aspx

Photo Art Range

JETMASTER® Image Display Systems

PHOTO PANEL

Create Stand Out Photo Displays In Under Five Minuets

Ideally suited for use with resin coated (RC) photo papers, the JetMaster® Photo Panel, manufactured by Innova Art is easy to use. Simply remove the release liner from the face of the panel and apply your print, then trim off the excess media from around the edge.

Available with a black or white edge trim, these photo panels are ultra lightweight and available in sizes up to 24x30". By selecting from a range of resin coated surface types you can vary the finish on the face of the panel from gloss, satin, lustre or even metallic!

Contact us or visit our website to see more about the JetMaster Photo Panel.

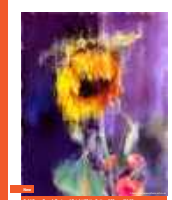

See how to make a JetMaster Photo Panel on the Innova Art YouTube Channel

Fine Art by Innova

The Innova Fine Art range includes a selection of different surface textures, including smooth and rough 'watercolour' type surfaces. All are flat matte and range from high white to natural white. We also include two double side coated papers for bookbinding or portfolios.
